

Oadby and Wigston Borough Council

Development Control Committee
19 January 2023

Central Government Policy Advice:

- **“What is a material planning consideration?”**
- A material planning consideration is one which is relevant to making the planning decision in question (e.g. whether to grant or refuse an application for planning permission).
- The scope of what can constitute a material consideration is very wide and so the courts often do not indicate what cannot be a material consideration. However, in general they have taken the view that **planning is concerned with land use in the public interest, so that the protection of purely private interests such as the impact of a development on the value of a neighbouring property or loss of private rights to light could not be material considerations”**.

1 DETAILED PLAN
ASHP (SCALE 1:20)

Location of ASHP

Constraints: Buildings and Circulation Routes

KEY

Site Ownership

Application Site

ASHP

Constrained Area

School Buildings

The ASHP cannot be located internally as it required to have free airflow to function.

Constrained Area

Circulation Routes

Roads and walkways to be retained

Constraints: Playfields, Playgrounds and Car Parking

KEY

Site Ownership

Application Site

ASHP

Constrained Area

Playing Fields and Playgrounds to be retained

Constrained Area

Car Parks to be retained

Constraints: Trees and Dense Vegetation

KEY

Site Ownership

Application Site

ASHP

Constrained Area

Trees

All trees or dense vegetation to be retained

Constraints: Proximity to Plant Room

Proximity Limit - Cost

The funding for this project allows for approximately £35,000 for ancillary works, including the trenching and pipework. Therefore, the maximum distance from the plant room would be 45m for the project to be viable. The current location is already on this limit.

Proximity Limit - Efficiency

The heat loss from underground pipework and pump pressure required all have an impact on energy usage. At around 100m distance the water circulation pump pressure increases by around 30kPa which is around 30% increase. The heatloss increases by around 10, so that's 10% less useful heat and wasted energy.

-  More than 150m from Plant Room approximately £120,000 min.
-  More than 100m from Plant Room approximately £80,000 min.
-  More than 50m from Plant Room approximately £40,000

*approximate costs based on current rates of £800 per linear meter of trenching/cabling. Costs will likely be higher when actual routing around buildings is considered.

KEY

-  Application Site
-  ASHP
-  Constrained Area

Proximity to Plant Room.
Approximate distance.

The further from the plant room the ASHP the less efficient the unit becomes and the greater the cost of trenching and pipework will be.

Constraints: Proximity to Plant Room.
Current Location = 45m

Constraints: Noise Impact

KEY

Site Ownership

Application Site

ASHP

Constrained Area - Classrooms

maximum 40dB rating at facade
therefore within 3m of facade is not acceptable

Constrained Area - Residential Facades
maximum 30dB rating at facade
therefore within 10m of facade is not acceptable
20m from the facade is ideal

Constrained Area - Residential Boundary
maximum 39.1dB rating at boundary
therefore within 10m of boundary is not acceptable

See accompanying Acoustic Assessment for further detail on methodology.

Constraints: All Constraints

Available Locations

The available locations are highlighted in green. Only the current locations has the space available to accommodate the ASHP and timber enclosure.
